

**TRIPLOID GRASS CARP (Amur)  
2017 FALL ORDER FORM**

Triploid Grass Carp (White Amur) can be successfully used to control excessive amounts of pond vegetation as an alternative to chemicals, water shade and physical harvesting. Stocking rates recommended vary – many people recommend a flat rate of 10 fish per acre of 10-12” size.

Successfully managed ponds have 30-40% of pond area vegetated for fish habitat. A POND DEVOID OF VEGETATION IS UNDESIRABLE; KEEP 30-40% of POND EDGE VEGETATED. This provides suitable area for fish to spawn and also prevents shoreline erosion.

Factors involved in proper stocking include:

- 1) Size of pond surface area.
- 2) Percentage of pond shallower than 8”
- 3) Percentage of pond vegetated in July-August
- 4) Dominant plant species (favored species include:  
Naiad, Leafy Pondweed and Large Leaf Pondweed.  
Less favored are: Waterlily, Spatterdock, Milfoil, Cattails, Algae)
